CCCatcher can cycle between a two groups of albums and play tracks. GROUPING: Groups of albums, when assigned, will be played back in sequence, as it were. Each album can be held to a maximum of 64 tracks. If it fails to, repeat what you've done before. If that doesn't work, reset and try again. SSEGAMING: Groups of tracks, when assigned, will be played back in sequence, as it were. The user can choose how many tracks to play at once. Each track can be held to a maximum of 64. This can be done by choosing the number of desired tracks and then assigning each track to the chosen number. QUEUEING: When assigned, each track will be queued, where the user can play or skip tracks in a queue-like fashion. PASTE: Let the user do the copy-and-paste action. MIDI: When assigned, the user can play an MP3 file using the user's default MIDI device (inputs/outputs). TRACKING: Tracks played will track to the current position. If the track or the shuffle is paused, the user can resume it at any point. FLEX: The "flex" or "bending" mode, which is not assigned, allows the user to play music in the "shuffle" mode, but allows skipping or breaking songs. THEME: For those of you familiar with Windows Media Player: CCCatcher will play mp3s based on the playlists I've saved. The default theme (currently) is 'Lost Love'. USING CCCatcher
===== In the example I've provided a MIDI music file (that I often use when performing at events) is being played using MIDI. Conversation: "" To the user: "Play me the user's default MIDI device." To CCCatcher: "Play me the user's default MIDI device." To the user: "Play me the user's default MIDI device." "" To play music: "" To the user: "I'm playing music, because I'm you." To CCCatcher: "I'm playing music, because I'm you." To the
