(Ubuntu) \* Update to v.105 build 5391" ah yep strange it used to work before? no just now I installed it, I have the 13.10 and when it updated automatically... it does not work no sound no fixes ? I tried a couple of things.. Pelusa, there is a Pulse audio wizard tool in systemsettings, maybe your audio is choppy. OerHeks I already tried that all the options are checked the audio is choppy Pelusa, did you check, there is something extra you can try? I'm using my laptop speaker only... and the video audio is choppy Pelusa, did you check your hardware audio controller? system > sound yes it says hardware detected soundcard hdmi/audio Pelusa, did you play with the input settings, like lowering the volume? OerHeks yes, I tried... you mean the volume on the headphones? Pelusa, i find no choppyness, and i see your volume on the headphones is really low. but if I play something on youtube, the video audio is choppy and if I watch a video on VLC the video audio is choppy I tried different options and it still happens any ideas Pelusa, try this tool, it might be the issue: OerHeks I'll try that out Pelusa, the f3e1b3768c
