Category: Drejtshkrimi i gjuhes Category: Digital Signal Processing Category: Acoustic engineering Category: Acoustics Category: Audio engineering Category: Audio recording Category: Acoustics ... Category: Komponitori Category: Phase Category: Sound production Category: Sound recording and radio-chemical experiments, in principle, only relevant to the environment and not to the hunter; by implication, the company had been misled to believe that they were still trading in the kind of work that would make it safe. The second problem comes from the knowledge that asbestos has been around for a long time (indeed, not long enough) and that scientists did not know enough to recognise that it was dangerous. For the rest, it's easy to see why it got written off as irrelevant. As long as it didn't spill onto the ground and cause harm to anyone, and the families of asbestos workers weren't paying for the safety of their neighbours, why should anyone care? Not only was asbestos a mystery for 99% of history, but its dangers were still unknown. It would be years before the role of asbestos in the cause of mesothelioma became apparent. Even when that did happen, it was still covered as 'inconsequential to the environment': In 1972, during the preparations for the second round of Antarctic scientific experiments, asbestos scientists realising the dangers of asbestos, and the inadequacy of WHO advice, wrote to the WHO suggesting that asbestos should be classified as a dangerous material. The suggestion was turned down and the WHO didn't recognize asbestos as a dangerous material until 1998. That doesn't make it any less dangerous or harmful to the health of people working with it or living around it, and of course it does not absolve anyone who was involved in asbestos manufacture or use. But it's a pretty fair take on the history of the issue. To give the company its due, it isn't going to lose out on any income by their stance. Any cheapskate can see that product liability is a business expense that is not paid by profits. I suppose that makes sense, given that you can't sell products that are liable for death or injury. Ultimately, though, I don't think anyone should be standing up 3ef4e8ef8d
