Example of a comma separated list of metrics to collect: ``json "metrics:kube-proxy,kube-dns,kube-controller-manager,kube-scheduler,kube-apiserver,kube-controller-manager,kube-scheduler" `` If your environment requires the metrics to be collected separately, use the `--metrics` parameter to separate them. The example below will show one metric (hits) for one of the servers (kube-apiserver): ``json "metrics:kube-apiserver,hits" `` {{site.data.alerts.callout_info}} There is a separate section in this document covering how to connect metrics with other monitoring tools like [Graphite]({{site.data.alerts.end}})
