Skins: Users can personalize the Windows 10 user interface with the desktop's different colors, fonts and button styles. Windows 10 brings new features to the table, including a redesigned taskbar, Start menu and Windows Store. It's also one of the first Windows 10 versions that includes OneDrive, a cloud storage service from Microsoft. As a result, it's much more secure, and comes with new tools to help protect your data. Windows Defender: For the first time, Windows 10 comes with built-in antivirus software -- and it's one of the strongest options you can get. The new antivirus software also has a built-in firewall, so you don't have to choose between the two. Microsoft also made sure that Windows Defender keeps itself updated, so your computer gets the latest security fixes. Windows 10 also comes with a redesigned browser. It doesn't look or feel like Internet Explorer, which means that many of you are probably already familiar with the new browser. Windows Phone: Windows Phone is now a wholly separate operating system that's just as powerful as Windows 10. All the software that comes with Windows 10 also comes with Windows Phone, and vice versa. If you've been using Windows Phone, you can now get the entire Windows experience on your smartphone or tablet. Windows Store: The Windows Store is now the one place to get all your favorite apps and games. Apps and games that you can't find on other Windows versions are also available. And with the built-in search tool, finding what you're looking for is just a few clicks away. Windows Kernel: Windows Kernel is the core operating system functionality that all versions of Windows share. It's not like the OS itself, but it's what powers the operating system and makes everything else possible. Windows 10's Windows Kernel is 16-times faster and 18-times more secure than the Windows 7 Kernel.
