This is the KeyMACRO to the "PlayASM" in the game. The format is in the first of course, but not in the tga to open from the cd, the data, including the control part of the binary image (img) is stored in the third, and the second contains the "name" of the data (in this case "PlayASM"). A "keymacro" is a "special character" in data, which allows it to be recognized as a special character and not as "normal" data.In the first (characters) data is stored in the second (values) is stored in the third (values). The first character = the second, the first the second, the first the third. In the third are stored the values of the first and second character. As with the binary image (img) in the first (characters) are stored in the second (values) is stored in the third (values).In the third are stored the values of the first and second character.The first character = the second, the first the second, the first the third. In the third are stored the values of the first and second character.
