SecuritySetter allows you to set two types of password to limit access to your PDF files: ◆ Open the Document password ◆ Users must enter this password, sometimes referred to as the user password, before they can open the document to which it applies. ◆ Change Security Options password ◆ Users must enter this password, sometimes referred to as either the master or owner password, if existing security options are to be changed. It is advisable to set this password, as if it is not set, anyone who opens the file could then remove any restrictions that might apply to it. Users can change or delete passwords, however, passwords cannot be recovered from the document should you forget them. When changing a document��s security it is important that you are aware that while SecuritySetter is able to make the changes you require, the remaining tools in the Master Toolbox, and many of Acrobat��s functions too, require you to perform a Save As operation before these tools/functions can be informed of the changes made with SecuritySetter. If you are changing security settings in an existing PDF file, it is also important that you are aware that many Acrobat functions such as drawing, annotation, text selection, etc., will not operate as expected if these changes are not made in a previous Save As. Mapsoft SecuritySetter Main Features: ◆ Support for adding, changing and deleting passwords ◆ Supports adding, changing or deleting document security settings ◆ You can set a user or owner password and add a password to open the document, change or delete security options and add or delete options ◆ You can even restrict access to your PDF files to particular users ◆ You can modify the document owner password and document master password at the same time ◆ You can even restrict access to your PDF files to particular users ◆ PDF files that have password set for security options are stored in their encrypted state ◆ Security options will not be shown in the document manager Version Info: SecuritySetter supports Acrobat 5.0 and above. Acrobat 5 was released over a decade ago and contains a number of limitations, including the inability to open some PDF files. If a new document type is added to a version of Acrobat before SecuritySetter supports that type, please check that your files can be opened with that document type. SecuritySetter has not been tested with Acrobat 5.5. Contact Mapsoft for Information: For more information on SecuritySetter, please contact Mapsoft. �P SecuritySetter provides a facility which allows users to set document level security for documents within Acrobat. SecuritySetter can be used with all versions of Acrobat, but is especially useful for the newer Acrobat 6 (and more recent versions). The tool can be used to set passwords for documents that have been set to be openable by the user, and is also capable of setting passwords for documents which have no such restrictions, with the password being changed on opening. �P SecuritySetter is also capable of removing passwords from PDF documents. It is able to do this on both openable and non-openable documents. �P SecuritySetter is a Universal Binary (Intel) application. It runs under Mac OS X (Intel) and Windows (Intel) platforms. �P SecuritySetter was developed using the latest versions of Intel��s Objective-C compiler and runtime libraries. �P SecuritySetter is a product of the Global Technology Group.
