## TMS Advanced Toolbars Menus

### What's New In TMS Advanced Toolbars Menus?

----- TMS Advanced ToolBars & Menus helps you create toolbars and menus that emulate the user interface of MS Office and Windows, as well as the standard floating/docking menus of those Microsoft products. For example, you can create a toolbar on top of the window that mimics the Office 2003 interface. This capability has been obtained through the usage of a large set of components that can be combined as needed. This component is extremely useful if you are a designer that wants to recreate Office 2003, Visual Studio, Windows 7, and other VCL styles using VCL components. Through its integrated previewer and generator, you can find out quickly if the style you want can be emulated using this component. -- Show more, or hide this notice.

----- Requirements: The Visual Component Library (VCL) for Windows is required. Flexible Html5 Calendar Date and Time Picker control that uses native HTML5 Date, Time Picker, and Calendars/Dates combination controls. The control has support for 24, 36, or 60 minute intervals, with date and time axis. It can be extended easily through design and configuration files. Calendar with two views This is a two view date/time calendar, one for day and one for month. There are two views of the date/time calendar : calendar view or month view. There is an option to set the max and min date/time. There are two DatePicker controls that can be used in both date and time modes. There are two events : click on a day and click on an item in the list. Flexible Html5 Calendar Date and Time Picker control that uses native HTML5 Date, Time Picker, and Calendars/Dates combination controls. The control has support for 24, 36, or 60 minute intervals, with date and time axis. It can be extended easily through design and configuration files.
