USB Autorun Crack+ Activation Code With Keygen PC/Windows

What is USB Autorun USB Autorun is a small-sized and portable piece of kit which enables you to set an application to launch as soon as a pen drive is attached to the computer. It does not include complex features or configuration parameters, making it accessible to all types of users, even the ones less experienced with such tools. No installation necessary Since there is no setup pack involved, you can drop the executable file in any part of the hard disk and just click it to run. Another possibility is to save USB Autorun to a removable storage unit, in order to run it on any PC directly and without previous installers. An important aspect worth mentioning is that it does not create new entries in the Windows registry or Start menu, thus leaving the disk clean after removal. Support for pen drives and other types of devices Apart from pen drives, the application offers support for keyboard, mouse, micro SD and other types of devices, in order to automatically run a program when any of them gets connected to the PC. Changes are immediately applicable and log details can be studied in the main frame. There are no other noteworthy options available here.

Evaluation and conclusion We have not come across any issues in our tests, since the tool did not hang, crash or pop up error messages. It has a good response time to commands and consumes low CPU and RAM, so its impact on PC performance is minimal. Although it does not contain a resourceful set of features, USB Autorun gets the job done, providing users of all skill levels with a simple and convenient method of triggering a program to launch when a removable storage unit is attached to the machine.

USB Autorun

USB Autorun is a simple and intuitive way for users to run their favourite applications whenever an external storage unit is connected to a PC. It can not only execute them but can also create auto run entries for the Windows startup folder and other programs. Simply add a storage unit, launch the tool and select your run program or your auto-run. USB Autorun will search for pen drives, USB drives and most external storage devices within seconds and launch the selected executable file. After launching you will see a notification icon in the System Tray or taskbar. Like this you can always have any executable app, exe, scr, swf, dll, exe or other file in USB Autorun. 1-02-2008 01:12 PM DogPoet Homepage Review of the Week Quote: Originally Posted by Fredzel Question: What's the difference between the two? Dogpoet, I am looking forward to having a similar tool in the Windows 7 boot options list. 1-02-2008 01:04 PM Jlopez Quote: Hi, I'm back with a new one. Win7 USB Autorun is like the other one, except it can run an EXE or CAB file only, not a swf or link. So it's for windows only. Here's a review of the new one: "StarNova - USB Autorun Utility v1.1 As I've been searching for a utility that can launch EXE files on my USB drives from the Windows "Start" menu, I can tell you that StarNova is just the program I was looking for. With StarNova, you can auto launch EXE files in USB drives. Other than this function, StarNova also has a lot of other useful features. "Features Among the features, the software has the following: 1. It can launch software in USB drives through either of these two methods: - Auto launch software on USB drive when you plug it in your computer, or - Auto launch software in USB drive by clicking a link in email
