AARON (Advanced Artificial Intelligence Reasoning Network) is an application that simulates the human central nervous system and all its components. The developers of the package say that the software helps users become more

productive, while providing a level of happiness and satisfaction. The software is one of the first chatbots that adapt to our personality, meaning that it changes its behavior depending on the mood we are in at the time. AARON is a utility that allows you to simulate the central nervous system and its main components, using settings that change the levels of dopamine, melatonin and serotonin (the human emotional chemical). You can use AARON as a system that helps you get things done. AARON is not a chatbot, but a tool that simulates the human central nervous system and allows you to chat with another robot. You can use AARON as a device for taking care of your daily routine, such as remembering phone numbers, browsing and manipulating the web, sending messages, analyzing and updating files, creating a calendar, getting information from the Internet, working with documents, finding information, playing a game, and much more. AARON can be an excellent device for doing simple tasks quickly, such as taking appointments, opening files on your computer, updating information, and much more. Moreover, the software can also be used as a virtual assistant by adding some intelligence to it. AARON's creators claim that the software increases productivity and provides you with happiness. The speech recognition tool is implemented so that you can have conversations with a friendly, virtual robot. AARON learns and grows during the course of your conversations. The chatbot works by reading your messages and simulating the thinking of a human brain. As the software becomes more familiar with you, it learns new things about you and allows you to create a personal relationship. Its developers claim that AARON can learn over hundreds of thousands of conversations.
