Any antivirus (AV) or antimalware (AM) software you have installed on your PC can be used to remove the application from your computer but YOU must purchase the individual program or subscription for AV/AM if you want to remove this application. What is the program? PC-Popper is an application designed to help you improve the performance of your computer and keep it clean by removing junk and obsolete files along with malware. Comes with a minimal and advanced interface First off, you should know that the application includes two GUIs, namely the Easy-POP and the Advanced-POP. As you probably hinted, the first one has the role of quick maintenance, cleaning or error fixing tool and it mostly addresses users who prefer to perform these tasks fast and painless. The Advanced-POP UI comes with several tabs that permit you to preview more details about the functions available. For instance, you can enhance your computer's speed by enabling the service optimization or performing a full defragmentation of the hard disk. Alternatively, you can browse through the files that can be cleaned and uncheck the ones that you would like to keep, such as browser or app cache. Allows you to fix system errors and manage startup The program enables you to repair various system errors that have been impacting the way you operate your computer. More accurately, you can fix icon errors, Windows installer, file association errors, path environment variables or registry errors, just to name a few. In addition, the app can help you remove invalid entries that can lead to errors and incompatibilities, such
