One of the primary differences between AutoCAD Civil 3D and AutoCAD LT is that AutoCAD Civil 3D uses a lot more technology to allow civil engineers and architects to accomplish more with fewer steps and with greater efficiency. This also allows civil engineers and architects to save time and expenses. Civil engineering modeling, simulation, analysis and visualization are built in and available through standard interface AutoCAD Civil 3D is designed specifically for the needs of civil engineers and architects. Civil engineering objects are organized by their function, and can be linked together

for working with multiple sections of a project at the same time. AutoCAD Civil 3D uses real-time simulation and analysis.

Civil engineers and architects can model, analyze and evaluate designs for their projects in a way that is impossible with traditional methods. AutoCAD Civil 3D has wide accessibility. It can be used on either a PC or on a MAC. Both Windows and OSX are supported. AutoCAD Civil 3D is compatible with most AutoCAD file formats, including AutoCAD LT files.
