XAML and WPF allow Windows Forms, 3D, animation and other user interface components to be added to AutoCAD. AutoCAD commands (subroutines), and macros can be written in the AutoLISP language. AutoCAD and similar products have long had a rich set of macros called "AutoLISP" (short for Autocad Instruction Language). These were originally primarily used for customizing the product, but have recently been repackaged as Autocad Command Extension (.acx) packages. Communication AutoCAD and other Autodesk products use the Internet and/or the File Transfer Protocol (FTP) to provide file and data exchanges among the user's computer and the AutoCAD system. XML The DXF file format used by most AutoCAD applications is specified in ISO 15288, though the new ISO 15288-2 provides an additional level of XML schema interoperability. Microsoft Visual Studio includes a feature called "DXF Import/Export Wizard" that can convert DXF files to/from most other XML-based file formats including: XML Paper Specification, eXtensible Stylesheet Language Transformations (XSLT), eXtensible Business Language (XBL), Adobe Systems' XML Paper Specification, eXtensible Markup Language (XML), and the Extensible Hypertext Markup Language (XHTML). History The first computerized draftsman was Marvin Free, using a program to create military maps. The earliest successful CAD program was AutoCAD for AutoLISP. AutoCAD was first released in 1985. Reception AutoCAD is used by millions of people worldwide, including architects, engineers, designers, and students. AutoCAD was rated the #1 CAD program for the PC by USA Today in 2005, 2008, 2009, 2010, 2011, 2012 and 2013. Q: Make Function to Generate a String of HTML I'm working on a project that dynamically generates HTML content based on what's being inputed. So if the user types: , the output would be: I have made a function to do this, but I'm not sure if this is the best way to do this. function generateStuff(content) { var newcontent = ""; var find = ""; for(i = 0; i ") > -1) { newcontent += "" + find + ""; } else { newcontent += content[i]; } } return newcontent; } A: I don't see the point in creating a function when you could just use HTML parser, let's say it's a very simple HTML parser that does exactly what you ask for: function parseHTML(html) { var ret = ""; var find = ""; for(i = 0; i ") > -1) { ret += "" + find; } else { ret += html[i];

What's New In AutoCAD?

Creating designs for the first time, or adjusting existing designs, is faster and easier with Markup Import. Import a digital file and add changes to your drawings automatically. The newly imported object snaps to the nearest grid, making it easy to position objects precisely and create more accurate designs. Markup Assist simplifies markup tasks by highlighting any design data that matches a selected object. Drawings and specifications can be edited directly using a mouse. (video: 1:45 min.) Drafting Room Improvements: AutoCAD's Drafting Room has become even more powerful with the introduction of a new feature: Drafting Room Connect. Drafting Room Connect allows you to connect to another AutoCAD installation. This means that when you are working on a drawing you are connected to an installed copy of AutoCAD on another computer or device. This makes it possible to work on the same drawing using different tools and at the same time share your drawing with other members of your team. (video: 1:15 min.) In addition, the Drafting Room can now communicate directly with a Microsoft Office desktop application, for example, with the introduction of Microsoft Office integration. You can access Word, Excel, PowerPoint, and Outlook data directly from the Drafting Room and make changes to Office files. Geometry Modeling and Advanced Math Improvements: Geometry modeling and advanced math capabilities provide more precision, speed, and flexibility than ever. Easier to work with, advanced math symbols and tools make it easier to design with precision and create more accurate models. 3D modeling: See, draw, and edit 3D geometry more easily than ever. AutoCAD's powerful 3D modeling capabilities bring new power to your work. 3D modeling includes the ability to see your design as it is being modeled. New: Create a 3D model and view the model in any view. Scale, rotate, and move the model and see how it looks in any view. See, create, and edit 3D geometry with no more than a click and drag. The new 3D Model Editor makes it easy to quickly create 3D geometry. It works by creating a cross-sectional view of your model. Drag and drop items from the workspace into the cross-sectional view and easily create, delete, and modify your model. Design a box that looks like a cube. Move a box from one
