Learning Photoshop: A Beginner's Guide for Beginners Photoshop has many features that can be intimidating and difficult for beginners to use. We have compiled a list of seven Photoshop features that can help you get a handle on the program quickly and add to your arsenal. 7 Photoshop Features Every Photoshopper Should Know Swatches Every color in Photoshop is represented by the color model, or swatch. Each swatch color can be identified by a number (otherwise, it's just an RGB color). To create a new swatch, click the New Swatch icon at the bottom of the color palette. The New Swatch dialog box appears. In the Swatches option, select the colors you want to keep. To deselect a color, right-click and choose Deselect Color from the shortcut menu. To change the blending mode, click the thumbnail of the color, and then select the blending mode that's most suitable for your image. Be sure to always keep the Default swatch as the current swatch, not the Sample swatch. You can find a complete list of all of Photoshop's swatch color options here. Manipulating the document canvas Photoshop uses the document canvas, or layer. Every new layer starts out completely white. You can add a color to a layer by clicking the New Fill or New Stroke icon at the bottom of the Layers panel. A color palette appears, with a color strip at the top. Click each color that you want to add to the current layer to place the selected color into the current layer's color. Click OK to apply the color to the layer. You can select the layer itself, and use the Select Color dialog box to select color directly. You can adjust the size of the border of a layer by clicking the border on the layer's thumbnail in the Layers panel. You can also adjust the position and size of the entire layer through the Layer options. The Transparency panel The Transparency panel is a tool to make corrections to the transparency of an image. You need to make corrections such as cover-ups of clipped areas or other areas where an image is transparent. You can also make a color swap here. While in the Transparency panel, hover over a color to see where it is in the color model. Right-click and click Interchange Colors or Swap Color

Photoshop has been around for ages but as a web designer Photoshop has become more and more essential to your work. It's very important to make sure you can use Photoshop efficiently for your job. Below I'm going to look at some of the most commonly used image editing and creating tools in Photoshop. Useful Photoshop Elements Tools Photoshop Elements is a graphics editor for amateur and professional photographers, graphic designers, web designers, meme makers, and others. As such Photoshop Elements isn't really as user friendly as Photoshop. I would still recommend using Photoshop Elements even if you aren't a designer, if you really want to master the most used tools (as Photoshop Elements is not really a web design/graphics tool). Below you can find the most commonly used tools for Photoshop Elements. Q: The non-resilience vs. the eco-resilience Eco-resilience is defined as the capability of a system to absorb, accommodate and process disturbance, and then return to a new equilibrium state. The system is “eco” because its status is expressed as the interaction among all the living organisms and the nonliving environment of the biosphere. Ecological resilience describes changes that have long-term positive outcomes for the ecological community as a whole. It is the ability of a system to undergo a sustained change (through regenerative or compensatory processes) and return to the same former state once the disturbance has passed. I have a problem distinguishing between the two concepts. For example, a tsunami is recorded as a disturbance on the “eco-system”. But as the level of water rises, the “eco-system” adapts accordingly. This results in the system’s restoration to the same pre-tidal state as before the disturbance. So, the process is “ecological”, but is it “resilience”? A: Yes, your example is an example of eco-resilience. In general terms, eco-resilience is about the "system" as a whole – the ecosystem itself. It doesn't necessarily mean that the whole system moves to a new equilibrium state, which would be an example of resilience. An example of eco-resilience would be an example of natural selection: For example, the population of certain species of dog will grow very fast and, due to its superior hunting abilities, will out-compete the population of the other species. This reduces the population of the other species, meaning it is less able to hunt and reproduce. Since the surviving population of

***** HOW TO CREATE A SPIRAL DRAWING
Brush Tool To create a spiral drawing, first use a simple brush on a new layer to give a clean canvas. Select a brush that has a soft edge, such as the Brush with Hard Round Cap or Brush with Edge Round Cap. Draw a line to form the center of your spiral. Then close the brush, and use the Selection tool to select the line. ***** ROUND BRUSH FLIPS ARE USELESS: How to Use a Spiral Tool To create a spiral brush, first create a new layer with a simple brush (see the previous tip). Select the Brush tool and click your first point in the center. Continue selecting points around the outer edges of the spiral. Press Enter (Return on the Mac). Click the Edit point button to view the last point you selected, and click the first point on the next line. ***** "POINT BRUSHES"—BRUSHES THAT LOOK LIKE A POINT You may find that when you're making a gradient, point brush, or spiral brush, a bit of the Photoshop-y paintbrush consistency starts to sneak in. Luckily, point brushes are very easy to create. To make a point brush, draw a line and then set the Diameter of the Brush tool to a value less than or equal to 0.5. This will leave a very thin line. ***** After you create the line, select both the line and the Brush tool. The Brush tool options will come up. You can select Smoothing from the Interpolation panel. Select Sharpen from the Transforming panel. Choose a color from the Select Color panel and click OK. When you're done, set the Layer's Mode to Screen or, if your image is
