Apple's Retina MacBook Pro, and the series of MacBook Pro refreshes announced yesterday, iFixit has taken the 2016 refresh MacBook Pro models, including the 15-inch version with a 2.8GHz Core i7, 4GB of RAM, and 256GB SSD, and teardowns them to see what makes them tick. Following the teardowns, iFixit is highlighting three key upgrades over last year's similar MBP, including an improved graphics adapter, Thunderbolt 3, and Apple's new slim-bezel design. On the internal logic board of the 15-inch Retina MacBook Pro, iFixit found quite a bit

of change, including a new Intel X299 chipset, new mainboard design, more power-efficient components, and a new Apple-designed Thunderbolt 3 controller and power delivery system. With a switch to the new hardware, iFixit found that the boot time decreased from 45 seconds to less than half a second, in part because of the new graphics processing subsystem. The biggest changes are in the three new ports on the motherboard, which now includes four Thunderbolt 3 ports (a new addition), two USB-C ports, an HDMI port, and a USB 3.0 port. An
