V2.0.0 by bitRisky software - Warez. TINA. A: The RAR format  
is perfectly safe if you don't exceed the maximum archive size. It  
is just that no one has ever checked if your program does not have  
the capability of hacking past that limit. If there is a RAR format  
that's faster or more efficient than the 7z format you are using,  
then you should use that instead. To answer the actual question:  
The RAR format used by 7-Zip is not safe if you exceed the limit.  
When you download a RAR file from a website, you are missing  
all the protection features of that format. The only protection a  
RAR file has is that it only opens when that file is in a special  
format; otherwise it might not work. Even so, the protection is  
there only for read and write access; the data in the archive is  
completely unprotected. You can use any modern web browser  
and download a file that size through the standard save dialog in  
any modern operating system. You won't need to use the arcane  
RAR archive format to do it. Archive formats have no security  
whatsoever in the common sense. Encryption does have some  
effect on the reliability of the format. The only safe RAR format
