Keymacro is a freeware application designed for users who wish to quickly and easily create passwords with a maximum of 12 characters, plus digits. It features a full-featured graphical user interface, allowing you to create complex passwords in just a few clicks. You can create your passwords in three ways: in the order that you want to appear, randomly, or in groups, which makes this application a great alternative to the complicated password generators found in most other password generators. You can personalize your passwords by picking colors, fonts, and keys from a variety of palettes. The results will be saved in a file that you can open at any time. While your passwords are not stored in a database, you can decide to set a password manager to handle the saved passwords. Keymacro has a number of advanced features. You can save the contents of selected pages, such as the login page, your start page, and home page, in separate files. As a result, you can easily jump to any of them at any time. You can edit passwords on the fly or only if you need to. You can also copy and paste passwords with just one click. Keymacro allows you to save passwords locally or on a remote server. You can synchronize the saved passwords between different computers, which can be a real time saver.

Keymacro allows you to add extra information to your passwords such as the current date and the currently logged in user. This makes your passwords more secure by allowing you to avoid or recover easily if you forget them. Keymacro allows you to add custom fields that can be displayed on any password page. In addition, you can add an image, an empty box, or a link to the current page and anything that is defined in the definition panel. You can choose whether the display format for your passwords should be in table, list, or list-with-icon format. You can even make a mixture of them. This application is freeware, and you can download it from our software library and run it for 30 days without any restrictions.
