What's new in this version: - Improved performance

Preliminary evaluation of the Chinese version of the University of California San Diego Posttraumatic Stress Disorder Reaction Index. The aim of this study was to translate and evaluate the Chinese version of the University of California San Diego (UCSD) Posttraumatic Stress Disorder Reaction Index (PTSD-RI) in a sample of persons with posttraumatic stress disorder (PTSD) and in trauma-exposed psychiatric patients. After an exploratory factor analysis, factor loading and convergent/divergent validity were examined by investigating correlations with the clinician-rated Montgomery Asberg Depression Rating Scale, the Clinical Global Impression Severity scale, the structured clinical interview for DSM-IV, and the PTSD checklist. The confirmatory factor analysis showed a good fit to the data. PTSD-RI showed high factor loading on the core PTSD symptoms, and it correlated with the PTSD symptom checklist, Clinical Global Impression Severity scale, and Montgomery Asberg Depression Rating Scale. Cronbach's alpha was acceptable. The PTSD-RI is a self-report questionnaire that can be used with Chinese people with PTSD.

Q: Is the inclusion-minimal critical section - shared between all threads - the best way? In my multi-threaded program I have a critical

Add text watermark on a batch of photos with Image Date Time File Name Stamp Cracked Version. You may insert simple text or add a timestamp watermark, containing the date when the image was created, the date of last modification or the current date/time. Add custom watermark on a batch of photos with Image Date Time File Name Stamp. You may insert a plain text as a name or a signature. Add custom watermark on a batch of photos with Image Date Time File Name Stamp. You may insert a name as a watermark, using a custom font or a color. Add a custom watermark on a batch of photos with Image Date Time File Name Stamp. You may insert a name as a watermark, using a custom font or a color. Add timestamp watermark on a batch of photos with Image Date Time File Name Stamp. You may insert a plain text as a name or a signature. Add custom watermark on a batch of photos with Image Date Time File Name Stamp. You may insert a name as a watermark, using a custom

Image Date Time File Name Stamp is a simple to use application which enables you to manipulate a large batch of pictures, by placing a watermark on them. Thus, you may insert the date they were taken, the current date or a simple, customizable text watermark. Moreover, you can place the file's name as watermark, as well. Batch image processing The software can easily handle batches of photos, in a short time, by placing the required watermark on each of them. The photos are saved in the indicated output folder, with their original names, which means you need to be careful not to overwrite the original data. You may position the watermark in one of the nine preset points, on the surface of the image or in a custom location. Simply fill in the X and Y axes position, the values being measured in pixels. The software can also apply image compression to each file, in order to reduce its size on the disk. This is also the purpose of reducing or enhancing the pictures quality. You may simply select one of the percentage values. Higher values indicate a better quality and larger filesize. Customize the watermarks Image Date Time File Name Stamp offers you three options for the watermark. You may insert plain text, such as a message, a

name or a signature. You may place a timestamp watermark, containing the date when the image was created, the date of last modification or the current date/time. The data is acquired from the image's metadata or from the system time. Alternatively, you may add the file's name as a watermark, in custom font or colors. The software also allows you to freely resize the image, by pixels, inches or millimeters, but does not automatically preserve the aspect ratio. Add watermark to series of images Image Date Time File Name Stamp is a reliable software that enables you to place a watermark on large batches of images. It can come in handy when you need to add the date on photos taken at a particular event or place your signature on them, for recognition. You may easily customize the font and color of the text.

Q: Running a script when Ubuntu boots and keep it running So I wrote a shell script that I want to run everytime I log in to Ubuntu. How can I keep it running? I mean, when I log out I don't want it to stop. The reason is that I want to read the battery status from a
