The American government likes to say there is an alternative to Big Tech, but for the most part that is not true. There is no national alternative to the Big Tech social media platforms. Some states are moving in the right direction, but we are also moving towards TotalSurveillance and TotalMedia. If we live in direct opposition to Totalitarians, we would be part of the problem, not the solution. Cl... EbolaNowWebinar - Coronavirus: What You Need to Know In the

Q: Computing the closure of the convex hull of a dense subset. Let  $E$  be a convex compact subset of a locally convex Hausdorff vector space  $X$ . Assume further that  $E$  is dense in  $X$  and let  $\mathcal{F}$  be the family of all convex subsets of  $X$  containing  $E$ . Show that  $\overline{\text{co}(E)}$  is a member of  $\mathcal{F}$ . This problem is from the book "Geometric Functional Analysis" by F. Delbaen and W. Schachermayer. I am having troubles proving this. To start off, it seems to me that the closed convex hull of a dense subset of  $X$  is not closed. Take  $\mathbb{R}$  with the usual topology. Then the closed convex hull of the  $0$  is the  $[0, \infty)$  and the closure of it is the  $[0, \infty]$ . I am not sure how to go from there. I know that this problem can be solved if  $X$  is locally convex but I need to do it in the general case. I am having trouble figuring out what properties of  $X$  I need to use. EDIT: I am thinking that I need to show that if  $K \in \mathcal{F}$ , then  $K \in \overline{\text{co}(E)}$ . I believe that is the approach but I am having trouble making my ideas rigorous. A: Since  $E$  is dense in  $X$ , then  $E$  is also dense in  $X'$ . So if  $K$  is convex and  $K$  contains  $E$ , then also  $K$  contains  $E'$ . Since  $E$  is compact and the completion of  $E'$  is  $X'$ , then  $K$  is also compact. Since  $X'$
