System requirements: Microsoft Windows 7 / Windows Vista / Windows XP / Windows 2000 / Windows 2003 User reviews: Hey all! As many of you know, I'm always trying to make our users happy with new releases, so I'm pleased to tell you that I just released version 1.1.1 of this amazing converter. This version comes with a few fixes and some minor interface improvements. Your comments and feedback is really important to me, so please let me know if you find any bugs or if you like some changes that are mentioned here. The other changes are only minor, but may be interesting for you. You will be able to select the file format to save the file as before. However, I have changed the default option of exporting the files to the list to save them all as MP3 files (rather than RIF) I hope you can see the new improvement in the interface! This program does just fine. It can convert most video formats in about 5-10 minutes depending on the complexity of the video. But, a problem that I have seen is that the program freezes intermittently. I don't know exactly what causes it, but it seems to be an issue with the video files being processed. A simple pause can sometimes work around it. Hi all, I've just uploaded V2.0.0 of this program. This is a major release that I'm very proud of because I've corrected some big errors and because of this there are no more possible bugs. Also, this new version allows to create a list of videos to convert with the new batch process. Pricing should be clearer from now on, but I'll explain all the parameters in the tooltips so you can have a clear understanding of what they do. I'm still searching for a good icon for the program, so feedback is very welcome (Please click on the "What's New" button to see the list of changes).
