A noun is a noun. It doesn't matter if it's physical or digital. This is how the value gets created. Here is how the value gets created in a digital case: User generates ideas that he can turn into a product. He then shares these ideas with other users through the Internet or by doing some customer's work for them. Each user in turn adds his assets to the collective assets that have been generated. Then the value gets generated from these assets by the person who finds a way to best leverage these assets. Here is how the value gets created in a physical case: User goes to the bank to withdraw money. He makes an offer to the bank to give the money to him. The bank accepts the offer. User gets the money. Here is how the value gets created in a hybrid case: User sees a person in an online chat window. He reaches out and offers to help that person in exchange for a non-material reward (bonus points for example). The person accepts the offer. User gets the bonus points. Here is how the value gets created in a non-material case: User speaks at a conference about the important societal issue of the day. The title of the conference is "Defining the Problem: How to Solve It". He begins with "What is a problem? In this session, we will define the problem..." You see where this is going. Because the person who reads this blog knows all of the above stories, he/she knows how a value gets created. The value is generated from the people's creative activities. Here are a few links that can help you understand better how a noun can be defined: Creating and collaborating
