A case report: Electroconvulsive therapy for a woman with anorexia nervosa and associated depression. We describe a patient with anorexia nervosa and depression who improved with electroconvulsive therapy (ECT). A 17-year-old girl was admitted with a history of anorexia nervosa and depression. She had been hospitalized for over a year, treated with a multidisciplinary program. We started ECT. Her symptoms disappeared after the third session. After a further eight sessions of ECT, the patient has been admitted to a psychiatric unit with minimal eating disorder symptoms. We review the literature on ECT in the context of the treatment of depression in anorexia nervosa.Q: How to extract duplicates from array of objects?
