MicroRNAs (miRNAs) are key regulators of gene expression and have been implicated in both pathogenesis and treatment of inflammatory bowel disease (IBD). To study the role of miRNAs in IBD, we analyzed miRNA-22 (miR-22) expression in colonic biopsies of Crohn's disease (CD) and ulcerative colitis (UC). Biopsies from three CD patients and three controls were analyzed for miR-22 expression using qRT-PCR. In addition, miR-22 levels were assessed in biopsies from an independent cohort of 12 CD and 11 UC patients. Patients' characteristics were analyzed and compared with miR-22 expression. Finally, the effect of TNF-alpha (TNF- α) and IL-10 on miR-22 expression was analyzed in primary colonic epithelial cells. The expression of miR-22 was significantly increased in CD and UC compared with controls (p
