Tom Shelnutt, who lobbied for Enron in Ohio, seems to be ready to work for the Ohio Coal Association. By Kathleen Hunter, The Associated Press 7/23/2001 - In Washington Copyright 2001 Associated Press WASHINGTON (AP) - Lobbying records show a longtime Enron Corp. energy industry lobbyist is now working for the Ohio Coal Association, an industry group that opposes federal pollution controls for power plants. Tom Shelnutt, who started working for Enron in 1989, has been working for Ohio's coal industry since 1998. That's when he started working for the Coalition for Affordable Energy, an industry group that has been lobbying against air pollution controls on coal-fired power plants. Now he's working for the Ohio Coal Association. Tom Shelnutt has not responded to questions about his new position. Shelnutt did not lobby on behalf of Enron in Ohio in 2001.

### **What's New in the Binary Image File Base64 Translator?**

Most FTP clients take advantage of compression to compress files. However, it is rarely used to compress the download. The file type is called APTX and its used by Apple Mail. The FTP standard defines multiple commands to determine what to do. The SIZE command is used to determine the size of a file. [W]rite Mode Which command you choose depends on what you want to do with the file. This file is a picture and the purpose is to download it. [A]ll Mode Which command you choose depends on what you want to do with the file. The one and only reason I'd use APTX compression is if the client insists. The only client that I've seen that does this is Adobe Mail. It works by downloading the file and renaming it to a random string. It then uses the APTX extension to load the file. I've only ever used this to download Apple Mail pictures from a web server. It's not a client for downloading stuff over FTP. .RAR stands for: 'Recovery And Archiving' It is used to protect archives, e.g., ISO, RAR, etc.. RAR archives are self-extracting archives with an extension (.RAR). It is a command-line program that recovers the content of a.RAR archive when it is damaged. It is used to create an archive of a file or a set of files. [W]rite Mode [A]ll Mode Open Mode • The RAR utility is used to compress files to an.RAR archive. It can create archives of any file format that can be used with the Windows built-in archive manager. A.RAR file is just a container file, that is, it contains no real data. The file is actually compressed using a compression program. Some people use the same compression program that is used to create the archive. Archive formats are: • Portable Executable (PE) file • ARJ (Applied ARchive for Java) file • ARJ file • ISO image • ZIP file • RAR file • BZIP2 file • JAR file • TAR file • GZIP file • BZIP file • DLL file • CAB file • TAR file • EZ-Arc file • ARCHIVE (ARCH) file Archive format name: • ZIP format • RAR format • ISO format • ARJ format • ARJ file • ZIP archive • ARCH archive • TAR archive • GZIP archive • BZIP2 archive • BZIP archive • DLL archive • CAB archive • EZ-Arc archive Most FTP clients take advantage of compression to compress
