Q: How to select multiple rows but only one column value using Active Record query? I've been using Rails 3.2.8. I have a user profile where a user can select multiple days. I currently have it set up to only select a single attribute: value. My current query retrieves the specific user_id and then generates a query for the number of times that that user is selected on a given day. I know that I could make multiple selects and then manually add a comma at the end, but that doesn't seem to work in this case since I'm only returning one column value. User.where("profile_data_set_id =?", user.id).group('profile_data_set.profile_data_set_id').select("profile_data_set.profile_data_set_id, count(*)").joins('left outer join profile_data_set_day on profile_data_set_day.profile_data_set_id = profile_data_set.profile_data_set_id').where(:day => params[:day]).where("? >?", profile_data_set.created_at.strftime("%m"), profile_data_set.created_at.strftime("%m")) Any ideas how to adjust this to allow for multiple days? A: You could use having, which provides the conditional that it's necessary to add a comma: User.where("profile_data_set_id =?", user.id).group('profile_data_set.profile_data_set

Star Trek - Stardate Crack + Torrent (Activation Code) Free (Updated 2022)

Star Trek - Stardate Free Download can be used to select a date. If you do not want to use the function, you can use the previous version Stardate - Main. Version history 1.1 * Add an option "Month" 1.0 * Create interface version, including a bug fix on the date selection External links Category:Classic Mac OS programs Category:Discontinued Macintosh softwareQ: How to get a list of all IPs that reach a given network interface? Let's say I have the IP 192.168.1.1 and I want to know what other IPs are out there that have a path to this network interface. I could write a script that would do that but I wonder if there is a programmatic solution. I tried to use ifconfig but the program returns an interface only. I need an interface or a route. I then tried the iptables-save but I only get the table from before the rule. A: The simplest solution is to use the netstat command with the -rn option: \$ netstat -rn | grep -e 192.168.1.1 Kernel IP routing table Destination Gateway Genmask Flags MSS Window irtt Iface 0.0.0.0 192.168.1.1 0.0.0.0 UG 0 0 0 eth0 192.168.1.1 0.0.0.0 255.255.255.255 UH 0 0 0 eth0 This lists all the addresses that have a route to the interface in the numerically lowest order. The first number in each line is the host that the route was created for. The second number is the interface that the route was created for. So 192.168.1.1 will route to the host that has the lowest IP address on the 192.168.1.0 subnet. The -n flag will print the host and 6a5afdab4c

Star Trek - Stardate [Latest]

This widget can be used to provide a stardate on screen. It's always the first thing that you type when you want to create a stardate. All you have to do is click on a date of the stardate of interest and the stardate will be put on screen, with the date type, month and day (if your application needs it) or your planetary or solar system name, a color for the number of decimals and an opacity. Edit: I've made an example: Edit2: If you want to change the checkbox to change color of the number and text color then add the style to your CSS like this: #first { font-size: 18pt; color: #a020f0; } .stardate { width: 320px; height: 10em; text-align: center; line-height: 10em; text-indent: 10em; } Stardate The patheromone-mediated inhibition of gonadal development and vitellogenin production in oviparous teleosts. Polynesian flying fish, *Corydoras aeneus*, is a gonochoric teleost which exhibits pulsed vitellogenesis with no evidence of sexual maturation prior to maturation of males. In this study, we examined the role of the secondary sexual pheromone in sexual differentiation in *C. aeneus*. Animals were treated with a crude pheromone extract containing an endogenous sex pheromone and the testicular and ovarian developmental stages were determined at the end of treatment by histological analysis of the gonads. Treatment of fish with sublethal doses of the pheromone extract resulted in a significantly higher incidence of female fish (p

What's New in the Star Trek - Stardate?

Turns an Android DatePicker into a Star Trek stardate. Turns the datePicker into a red box with an integer number, a blue background and the standard month and day names for the selected date. Adds two different styles for each detail, a stardate and a stardate number. With a stroke it should turn into a space to indicate the selected date. Try the live demo & the app and let me know what you think about it. Any comments are very welcome. A: Android, Java version (Thanks JKaufman for your help) This is the code I developed and it is working well. Thank you for your help and comments! The code is following: public class StarDate_Picker { public static final String TAG = "StarDate_Picker"; private ImageView imageView; private int roundNumber; private DecimalFormat numberFormat = new DecimalFormat("000"); public StarDate_Picker(Context context) { imageView = new ImageView(context); imageView.setImageResource(R.drawable.stardate_alpha); imageView.setScaleType(ImageView.ScaleType.FIT_XY); imageView.setLayoutParams(new ViewGroup.LayoutParams(ViewGroup.LayoutParams.MATCH_PARENT, ViewGroup.LayoutParams.MATCH_PARENT)); } public int getDate() { datePickerDialog(); return roundNumber; } private void datePickerDialog() { DatePickerDialog datePickerDialog = new DatePickerDialog(this, new DatePickerDialog.OnDateSetListener() { @Override public void on

System Requirements:

OS: Windows 10, 8, 7, Vista, XP 32-bit, Vista 64-bit, Windows Server 2012, 2008 R2 32-bit, Windows Server 2012 64-bit, Windows Server 2008 64-bit
Memory: 4GB
Graphics: Nvidia GeForce GTX 660/AMD Radeon HD 7970/Intel HD 4000
DirectX: Version 11
Storage: 200 MB available space
Additional Notes: You will be able to play alongside up to four other players via Local Play and up to eight players via online multiplayer. View
