FastCube Crack +

A standalone demo of FastCube for Delphi and Lazarus. Developers who use the popular Delphi programming environment and need to perform data analysis through summarizing and reporting, could require a specialized tool for such operations. FastCube represents a set of OLAP (Online Analytical Processing) Desktop components that was designed in order to enable users to analyze data, generate summary tables (which basically represent data slices) and create a wide range of reports and charts for interpreting data. Being deployed bot as a compiled demo as well as a standalone installer, the package offers people the change to test its capabilities if they choose the compiled version. The standalone version supports almost all the versions of the Delphi programming language (7/2005/2006/2007/2009/2010/XE/XE2/XE3/XE4/XE5/XE6/XE7) as well as the Lazarus or C++Builder (2007/2009/XE2) programming environments. FastCube's components can be integrated with interfaces of host applications and, with its help,end users will not require any advanced programming skills in order to generate the required reports. Furthermore, the database connections can be established through the standard ADO / BDE components or any component based on TDataSets. People will be able to download and handle data arrays instantaneously and several predefined templates can be easily used for the summary tables. Additionally, the defined schemas can be protected from additional user changes. All the handled data can be easily saved in a compact format that can facilitate data exchange and storage. In order to increase flexibility even more, FastCube offers access to its settings both through programming as well as through the end-user interface. FastCube Key Features: · Generalized settings with advanced user interface. · Easy integration of FastCube with third-party ADO / BDE components. · Creation of summary and summarized tables. · Submitted data can be saved in many different files. · Possibility to compile the product as an independent application or as part of a comprehensive IDE. · Completely new objects to handle data arrays. · Ability to print in different languages. · Ability to work not only with a local database but also with a remote one. · Integrated data import. · Possibility to integrate tool with different viewers and editors. · Database relations can be easily set. · Internal data management and export

FastCube Download [32|64bit]

1. FastCube Product Key enables users to analyze data by visualizing and summarizing the data into "slices" through 3 ways: A. Table with 20 or more columns – allows comprehensive and deep analysis of the data B. Tabular line chart – can be used to detect particular trends in the data C. Pie chart – can be used for visualization of data distribution 2. Cracked FastCube With Keygen allows the user to generate a wide range of reports and charts for interpretation of the analysed data. A. Total counts and percentages by rows, columns, groups and regions B. Row, column, group and region totals, per-group and per-region C. All summary data aggregated into a pie chart – created with the sum of the cells for each element/category D. Averages and standard deviations of selected values E. Percentage changes (percentage of change for each category compared to previous category) F. Open matrix, quadrant, or radar chart g. User-defined custom charts (generally based on the FastCube Crack For Windows itself) 3. The end-user interface has an overview of all the completed reports. The user will be able to see the settings, reports and charts they created. 4. FastCube creates a compact format (Json or Csv) of the data for easy storage and sharing. 5. FastCube allows the user to generate data structures as well as summary tables through an intuitive and "drag-and-drop" interface. 6. FastCube can be used in two modes: as a compiled demo or a standalone installer. When the user installs the program, they can test the capabilities of the application and the default setting. 7. FastCube supports the Lazarus and C++Builder programming environments. What is new in this release: · New Company Name on FoxFire Incorporated: FoxFire, the creator of FastCube has been acquired by FoxFire Incorporated and moved to Montreal, Canada. An explanation on this is here. · New Company Website: FastCube has a new official website. · New Features: · Adds support of delphi versions from 2007 to XE7 · Rewrite GUI Designer · Add working code samples for all versions · Minor fixes · Misc. Developer Enthusiasts: · FastCube has been tested on Windows 7/2008 R2 and Windows 8 on 32 and 64bit. · FastCube has been tested on 09e8f5149f

FastCube Activation

FastCube is a comprehensive package that is based on an extended implementation of an already existing product. This package consists of one component named FastCube which offers a complete solution for the data analysis and reporting functionality, as well as offering advanced reporting features for ad hoc reports. Additionally, it comes with a component named FastCube Report, which is a complete report generator. The report generator can handle very complex report designs both for the Delphi and for the Lazarus programming environments, and does not require any programming knowledge. The report generator is a powerful tool that can generate reports that include mathematical expressions that can calculate and generate the required summaries through its included functions. The generator has its own user-friendly report designer that includes a preview of the report generated by the report generator. Since FastCube is based on the already existing product FastCubeReport, it can easily be integrated with the interfaces of host applications. This way users will be able to generate reports and obtain the necessary summaries through a standard way, without requiring any programming knowledge. FastCube Report: FastCube Report is a complete report generator that includes a report designer with a preview function to preview the generated report. It also offers an advanced function called Export, which allows the report designer to export the report's design so that it can be saved and replaced with the report designer's own templates for generating the required report. Moreover, it includes a report definition system which consists of several pre-defined reports that can be easily changed or altered by the user. Additionally, it includes a data manager, which is integrated with the report designer and which enables the user to edit the report's data and generate the summaries through mathematical expressions. The data manager can handle both through data querying and through Direct SQL statements. FastCube is supported with an easy to use graphical user interface that enables end-users to perform all the needed operations without requiring any advanced programming skills.Meister Eckhart's thought does not need to be experienced to be understood, and if we are not prepared to taste it, we are not adequately prepared to think it. For one must drink of it in order to understand. This blog is dedicated to bringing together these essays into one place. To show how they were seen together. To show the common thread that runs through them. We hope that it will also foster discussion on the relationship between TLP, Quakerism and Islam.package com.camunda.consulting.springboot

What's New in the FastCube?

FastCube is an analysis tool for data sets. it summarizes, stores, reports and graphs data sets. Users define their own schemes, data sets, metrics and measures to be used to create their reports and, depending on the user's preferences, the charts. The program can be used in its stand-alone version and the compiled version can be used as a DLL plugin in most Delphi programming environments and as a batch file in Windows. Quick Start Guide: To use FastCube, first, select a data set, field and build a scheme. While the fields in a table are identical to the fields in the table, FastCube provides additional metrics. FastCube used to call them fields. FastCube provides several predefined schemas such as "Total", "Column" or "Range". While the first two schemas show the metrics of the data set based on the data values of the selected field, the "Range" schema provides additional metrics based on the different values in the field based on the given criteria. For example, if you select a data set, field and range "0 = -200 to 0" from the last record of the data set, you will get an additional dataset in FastCube. Here, the first column shows the date of the record and the last column shows the difference between the values of the selected field and the given range. Upon defining a data set, field, and scheme, click on the data set and run the report. FastCube will automatically fill the other details of the created summary. FastCube offers the option to export the summary to a clipboard, use it in other tools or save it in the organized databases using the built-in TDataSet (there is more information about the data sets in the next chapter). For the reporting part of the program, FastCube provides several chart types such as the bar chart, line chart and pie chart. FastCube supports quite a wide variety of chart libraries, including amCharts and OpenFlash Chart. Users can use any of the supported library in their report. FastCube is a multi-platform tool (stand-alone and installer), and it has a user-friendly interface. Contents of FastCube Components: FastCube Components includes the following components: - FastCube Report Designer (FastCubeReportEditor) The FastCube report designer is a new report designer that is created as a part of the FastCube desktop toolkit. The report designer offers a rich GUI for
