More particularly, it relates to a technique for controlling the wiper device and the washer liquid feeder. 2. Description of the Related Art FIG. 8 is a schematic diagram of a conventional vehicle wiper device including a wiper motor. Referring to FIG. 8, a wiper motor 12 is fixed on a bracket 11 mounted on a lower surface of a door panel 10. The wiper motor 12 drives a wiper arm 13. A wiper blade 14 is attached to the wiper arm 13. The wiper blade 14 contacts an inner surface of the door panel 10. A power line 15 connected to the wiper motor 12 is supplied with power from a power supply. A brake circuit 16 is connected to the power line 15. The brake circuit 16 is provided with a brake lever 17. The brake lever 17 is pressed by a driver's hand. When the brake lever 17 is pressed, the brake circuit 16 brakes the power line 15 to stop the rotation of the wiper motor 12. In the conventional vehicle wiper device, when the brake lever 17 is released, the wiper motor 12 is driven by a drive current from the power supply. The drive current from the power supply continues to flow for a certain period of time, so that the wiper motor 12 drives the wiper blade 14 to wipe the inner surface of the door panel 10. Then, the drive current stops flowing. As mentioned above, the w
