

DLM – Download Manager is a simple program that enables you to organize all the items stored on your hard drive. The interface has an outdated design, resembling the classical one used in the Windows operating systems. The UI is split into two sections. One enables you to see all the files and directories included in a specified path, along with details such as filename and size, while the other lets you update item descriptions. The first section can be set to show all the items or just the ones without IDs. The software utility can also help you extract one or all the elements included in an archive, as well as add an item to it and search for DIZ files (plain text files containing a brief content description of the pack in which it is included). You should also know you can create a database in a DLMDB format or open a search window. The latter option enables you to look in the program files for a keyword that is inputted by the user. You can search within descriptions and filenames.

A small drawback of DLM – Download Manager is represented by the fact that the usual file browser is not supported, meaning you have to write the full path or copy-paste it. This can significantly slow down users, especially novice ones, that might not know how paths are written. All in all, DLM –

Download Manager is a small and useful file manager. You can easily organize your files into different folders, update their descriptions (formatting, size, etc.), add attributes to certain file types and clean up the trash as well as index your files. It is especially useful if you want to manage multiple user's files. You can upload files from your PC to your MP3 player, PDA or the web. You can also download files from the web directly to your PC. Moreover, it can search for files in common file systems as well as help you to organize your files (favorites, automatically organized into folders) and remove specific items from the trash. Features: Toolbar The toolbar contains a simple file explorer (and any other useful actions you might need). From the toolbar, you can easily view the file list and organize your items into folders. Speed Download Manager runs very fast. It uses a simple file explorer, therefore it does not need a bulky file manager. Folders In the File Explorer, you can see the list of all your folders on your PC. The list is presented sorted by type (e.g. general, flac, MP3). The top two rows on the list are used to navigate with up and down using the keyboard arrows. You can easily create folders and move items inside it. For example, you can create a new folder in the Desktop with the item My Documents. Move an item from My Documents to the My Photos folder. Open The Open dialog enables you to open selected items and files. When you open a file in Download Manager, it is automatically downloaded to the specified destination (e.g. PC, PDA, or Music player). Moreover, the associated media player is automatically loaded. Trash The Trash window contains the currently selected files. If you have a large number of files (more than the number of rows in the list), the trash will be displayed using the selected font size. You can sort the items in the window. If you have many items in your Trash, you can select some of them and drag them to another folder. Additionally, all the items in the trash can be removed permanently. Search There are two different search modes in Download Manager. You can search the list of files and folders, as well as the description of the files. Search Description: In this mode, you can look for files in the description field (the part where you write the description
