Markup assistants can simplify the design process by capturing your comments automatically, highlighting your questions or changing your answers. Using Markup Assist, drawing and design changes can be shared and incorporated in as little as a few mouse clicks. Adding and Removing Annotations with the Annotate command: With the new Annotate command, you can add markings, dimensions and notes on existing drawing objects. The Annotate command has been redesigned to make it easy to change the markup style. You can now easily define which type of annotation you want, such as dimension, markup, text or freehand drawing. You can also create and format multiple annotations and easily select which ones to place on a drawing. The Annotate command is also capable of importing external annotations, including AutoCAD.dwg,.eps,.pdf and.svg. New Layers: The new shapes of the Layer collection are the Baseline and Frames objects. (video: 1:10 min.) You can easily change the Layer order and shape, such as the way a line layer is shown or the way a hatch pattern appears on a boundary layer. You can create multiple layers from one or multiple objects. The layer type of a hatch pattern can be changed to match the Layer order. You can also change the color of an object on a Layer by Layer basis. Improved Style Chooser: The Style Chooser now includes icons and a toolbar for the new style-based annotation commands. You can select the style of the annotations directly from the Style Chooser. You can also import styles from other source objects (drawings, templates, and the current drawing). You can now also easily toggle between the default and a new style. The Include Objects in Styles command has been redesigned to incorporate this new feature. You can also now copy and paste style settings from other source objects. You can also import styles from other source objects (drawings, templates, and the current drawing). The Show Measure Data command has been redefined to make it more consistent with the new style-based annotation commands. You can now select different style markers (e.g., hatch patterns, ticks, lines and circles) for the same style (e.g., Annotation or
