

This all-new technology, known as “HyperMotion,” adds weight, speed, and acceleration on every move to create an unprecedented level of interaction and realism in the game that has never been seen in FIFA before. More in-depth tutorials, an all-new AI Trainer mode, and an improved player intelligence system to ensure gameplay is as natural as possible have also been included to further improve your FIFA gameplay experience. FIFA 22 is expected to be available worldwide on PC on September 27th. can be expressed as follows: ##EQU4## When it is assumed that the accuracy of the reading are the same, the influence of the relative illuminance changes upon the accuracy is corrected. In the optical data retrieval process the same magnitude of the influence must be calculated at the point of time when the data are read out. If the influence is simply multiplied by a value obtained by dividing the influences of the same magnitudes upon the magnitudes at the left and right sides of the relational expression (4), the influence will occur as the difference between the magnitudes obtained by multiplying the influences. If it is assumed that the influence of the change in the amount of light upon the change in the magnitude of the beam reflected by the data marks is equal to that on the changes in the magnitudes of the beam directly reflected by the data marks, the proportional constant becomes.alpha.=1. When.alpha. is set to 1, the influence is obtained as follows: ##EQU5## As described above, when the conventional data reading apparatuses are applied to a reproduction-only optical disk player, the influence is involved. Therefore, in the conventional optical disk players, the bias of the output level and the variation in the output level over the time can be reduced, as compared with the case where such an apparatus is applied to a read-write optical disk player. The conventional optical disk players are also advantageous in that, when a read-write optical disk is used, the time for irradiating the optical disk is shortened. When it is assumed that the reflectance of the medium on which data is recorded is varied and the illuminance is affected as shown in FIG. 2, and the bias of the output level is also varied, the influence of the illuminance varies over the time. Therefore, the conventional optical disk players are disadvantageous in that, when the data reading apparatus is applied to a reproducing system for a DVD-ROM, a

FIFA is the ultimate soccer experience. This comprehensive videogame franchise has been a worldwide phenomenon for over 20 years, spanning multiple platforms and selling more than 135 million units. FIFA has created sport gaming history time and again, with FIFA 07 and FIFA 10 being recognised as the highest-selling games of their respective years, and now FIFA 22 is adding to that success with a greater focus on the core gameplay experience. FIFA 22 is the only official videogame in the hugely popular FIFA series that offers new animation and physics-based features. The goal of the FIFA development team is to make sure that every facet of the football experience has been improved. What does FIFA 22 add to the FIFA series? The FIFA development team at EA Montreal has worked on a wide array of improvements, including bringing back “id”. Be sure to join us for a live webcast at starting at 1:30pm ET What’s new in FIFA 22? From new players to new camera angles, here’s a quick look at some of the exciting new features of FIFA 22. Introducing “id” A staple of FIFA games since the beginning, “id” has returned to FIFA 22 and has been given a new and improved physics engine. Using cues from new animation technology, this long-standing gameplay staple has been crafted to deliver a more authentic, realistic and physically correct experience with the ball. Let’s look closer at some of the new and improved “id” features you can expect when FIFA 22 is released later this year. Player animations The improved animation model means players can pull up, lunge, and spin in ways never before possible. The team is proud to have “fused the magic of the animation studio with the performance studio” to deliver the smoothest and most realistic player animations in the series. This also means the animations have been updated across all 12 national teams. These include moves such as pulling off headers, lunging for the ball, and others, to add more variety and make the game look and feel more authentic. Indoor environments The indoor environments have been made to be more authentic. Teams can now create or work in purpose-built multi-level indoor arenas with all the requisite ornaments and artifacts that increase realism, including player facilities, such as training rooms, dressing
