There are 7 different brush tools, including the canvas brush, the selection brush, the gradient tool, the airbrush, the eraser, and the pencil tool. Adobe uses a proprietary raster graphics format which it calls Portable Document Format or PDF. In addition to layers, you can also apply effects directly to the pixels themselves, which you can read more about in this useful Photoshop tutorial. It uses a raster file format (.tiff,.jpg,.png, etc.) for storing digital images. There is a newer variant of Photoshop known as Photoshop CS 5, CS 5 Extended, or CS 5.5. It includes some new features, such as the

ability to edit vector images with offset layers, GIF, and JP2 image types. Photoshop CS 5 might also be known as Photoshop 7, Photoshop 7.0, or simply 7.0. tools. Now let's see the 25 best Photoshop features.

1. Add Layer Locks Layer Locks allow you to lock specific layers on their mouse positions to prevent accidental damage of other layers. It is possible to lock layers by overlapping them and clicking on the lock tool on the Layers Panel. To enable Layer Locks, right click on the Layers Panel and select Layer Locks from the pop-up menu (as seen below). You can re-order Layer Locks by dragging the Layers Panel item to move them. If you accidentally release a Layer Locks, simply select the locked layer (by clicking it once), right click and select Layer Locks from the pop-up menu. Once you have selected Layer Locks, the layer will be temporarily frozen and cannot be moved or edited.
2. Release Layer Locks To unlock the locked layer, simply release the Layer Locks.
3. Layer Mask Locks Layer Mask Locks allow you to lock any layer, except the mask, to prevent accidental changes of mask properties. To activate Layer Mask Locks, right click on the

mask and select Layer Mask Locks from the pop-up menu. To toggle between Layer and Layer Mask Locks, select the Layer mask option from the upper menu bar. Tip: you can also press the Ctrl and Ctrl (option/alt) keys while dragging a layer to lock that layer.

#### 4. Layer Comps

This is a great way to compare layers, so that you can instantly compare the changes you're making to a background layer with the previously saved version of the layer to see which changes made the biggest difference. To activate Layer Comps, right click on a layer and select Layer Comps from the pop-up menu. To update the pre-saved version of a layer, simply click on the button for the layer you want to compare

Tech-Journalist @National\_Review, founder and editor of Techmeme, and regular guy Tag Archives: history The National Review magazine is the most influential voice in the GOP conservative movement, and its website, the Daily Caller, is the second. But when it comes to news, they are embarrassingly ignorant. Today, the Daily Caller is reporting on an 1847 account of the Battle of San Jacinto by John R. Shoven, an Army private who fought in the battle. Shoven, who was born in Texas, is mentioned in the article because his name was confused with that of Texas president Sam Houston, whose name is cited in the same paragraph. I'm glad to see the Daily Caller try to correct this, but one can only admire the confusion of the reporter. The Daily Caller describes Shoven as "a soldier ... who witnessed a famous battle." This is not true. He does not witness a famous battle, he describes the one that he witnessed. He

says, “The fight occurred near the road leading to the encampment of General Houston’s army ...” Here is the link to the full-length article. I agree with the Daily Caller that the story is interesting, but I just don’t like the general feel of the article as a whole.

Q: Can't delete a struct using `std::vector`'s `erase` I have a vector of structs: `std::vector d_vec`; where `TBasic` is defined like this: `struct TBasic { int someA; float someB; }`; and an array of them, with some pointers: `TBasic* somePtr[n]`; Now, I would like to remove the first element from the vector (`p_vec.front()`), but it returns an empty vector. I first tried this: `for(int i=0;i`
