download, MDAemon and MDAemon crack along with. 39. MDAemon is reliable and secure mail server that does not require expensive .T6 optical elements are known, for example, from German Patent No. 821,861. These elements are designated in the industry as TFT elements. In connection with the sealing process for optical elements, it is very important that the surfaces facing one another be of equal quality. For this reason, the known process provides a specific type of sealing jig which, for example, includes a ring of very thin, flexible silicone rubber or of silicon rubber. The jig is intended for the simultaneous transfer of the optical elements to be joined, as well as for the sealing process. In accordance with the prior art, the sealing jig is so designed that, together with the optical elements to be sealed, it moves into the position of the sealing jig which is then placed against the opposing optical element. The opposing optical element then also rotates and this rotation can then be kept until the sealing jig has been removed from the optical element and the sealing process is completed. With the previously known process, great care has to be taken in order to keep the opposing optical elements fixed in their position and to ensure that they do not rotate. For this purpose, it has been known to keep the opposing optical elements in the required position by attaching the elements to support surfaces
