A study on functional aspects of the autonomic nervous system in children with Type 1 diabetes. Reports on autonomic control of a functioning cardiovascular and respiratory system and of the pupilloconstrictor system in children with Type 1 diabetes mellitus are sparse. We observed autonomic control in children with Type 1 diabetes by measuring heart rate, systolic and diastolic blood pressure, and mean arterial blood pressure, pulse transit time, respiratory rate, and the amplitude of the pupillary light reflex, both at rest and during exercise. The purpose of this study was to compare the results from children with Type 1 diabetes with results from healthy children. Data were collected during an initial examination and at a follow-up examination. The diabetes control was estimated by HbA1c measurement. Twenty-one children with Type 1 diabetes mellitus (mean age, 14.9 years; range, 10.4 to 16.9 years) and 18 healthy children (mean age, 12.5 years; range, 11.2 to 14.4 years) were included in the study. The children with Type 1 diabetes were subdivided into two groups: poorly controlled (mean HbA1c concentration, >8.5%) and well-controlled (mean HbA1c concentration,
