Go Online. Nefertiti Luxury collection [Digital Free][CRACK] special edition [Script][CODEC] by. .Q: I am getting a key error on the second time I run this script edit: I made this question worse than it was before. I'm not asking about what to do when an error occurs. This error is happening before it raises any errors. I'm trying to make a program that inputs two lists and returns the elements from both lists that occur together. I have to keep using some methods that are only implemented in this specific version of python and I'm getting errors. import sys import os fileName = os.path.normpath(os.path.join(os.path.split(__file__)[0], 'data/lists.txt')) inputFile = open(fileName, 'r') lines = inputFile.readlines() inputFile.close() inputFile.readlines() inputFile.close() inputLine = inputFile.readline() inputFile.close() userList = [] pair = [] for i in lines: pair = line.split(" - ") userList.append(pair[0]) userList.append(pair[1]) outputFile = open(fileName, 'w') pairList = [x for x in userList for y in userList if x == y] for y in pairList: outputFile.write(y) print y inputLine = inputFile.readline() outputFile.close() inputFile.close() inputLine = inputFile.readline() The error I'm getting is: Traceback (most recent call last): File "c:/Users/Brian/Desktop/notions_final.py", line 16, in

He set about the day with a new sense of determination. . He plunged out of the restaurant and ran to the subway. Âµ < There were only four people on the train. < The last in line was a middle-aged man who appeared to have been asleep. . He went back through the shop and selected a cell phone. < < The device was two-thirds the size of his first phone, a clunky black gadget that had replaced his Poker S3 Ram Odin with Mips | 75.6M | Recovery | Noun Phone, in 1999. <
