In essence, you cannot even mean what you have said.. With sparta ion software hack, your words are meaningless.. Elite Dangerous.Q: Calling a function with params in react native I want to know how to call a function with params. I have tried (with calling from react-navigation) but failed it returns undefined so i am trying with componentDidMount but i still got undefined. My code is below: import React, { Component } from "react"; import { View, Image, Button, TouchableHighlight } from "react-native"; import SQLite from ".././database/sqlite"; class HomePage extends Component { constructor(props) { super(props); this.dontTouch = {}; this.state = {
