The RubberBandLabs website recently featured a nice article about our Simple Computer. We see Simple Computer as an important accessibility tool for the "kiddie kompas" (as we like to call it) due to the built-in screen reading software and its simple, step-by-step operations. One of the users of the Simple Computer mentioned that she likes Simple Computer mostly because of its practical and not a little bit fun applications. She wrote: "I like that I don't have to get hung up on what computer science is, I just have to get it to do what I want it to do." We feel the same way. We like to focus on the practical applications of our products, like making people's life easier, making them more independent, and helping them to learn the computer. We're glad to see that our products are already helping many people and their families in their daily lives.This is a great "survivor" console. I got it (for $40) from a guy at craigslist. I've had it a month now and it's performed flawlessly. I originally didn't get too excited about a console, but after playing it, I can't stop. I love that the button layout is a good solution to remember various functions, plus it controls volume, back, pause, and start. If it were a little bigger, I'd do cartwheels over it.// (C) Copyright 2008 CodeRage, LLC (turkanis at coderage dot com) // (C) Copyright 2003-2007 Jonathan Turkanis // Distributed under the Boost Software License, Version 1.0.
