DX.RTAS.v1.0Q: how to filter a node-table by predicate I have a nodedataset in karate I wanted to do a query like this: var dataset = ctx.getRepository(CustomerData); var result = dataset.query.filter(predicate).getAll(); But it didn't filter the node-table. So I tried this: var predicate =

---

`new PropertyPredicate('AccountId', '=', 123); var result = dataset.query.filter(predicate).getAll();` Which also didn't work. Can I filter an `@NodeTable` by a predicate? A: As an alternative approach (from the comments), you can use the filter method of the `@NodeTable` rather than the query method of `@EntityTable`:

```
ctx.getRepository(CustomerData).filter(predicate, 1).fetch()
```

By default, this should retrieve a query of the appropriate type, e.g. `@NodeTable`. You can pass the `fetchSize` parameter, if desired:

```
ctx.getRepository(CustomerData).filter(predicate, 1, 100).fetch()
```

You can also pass a callback, if you wish:

```
var result = function(r) { return r; }
```

```
ctx.getRepository(CustomerData).filter(predicate, 1, 100).fetch(result)
```
