This new printing technique allows clients to instantly download copies to their phone and immediately follow up their print job with a phone call or email. Dropbox is a cloud storage app that allows users to have all their files and documents easily and securely stored within the cloud. The new printing technique allows customers to login with their Dropbox username and password. Users can decide to store their printing files locally on their computer or utilize the cloud storage service. After selecting the print file, customers can then print the document on their local computer by attaching it to the print document. Printing documents in the cloud works by utilizing a service called AWS (Amazon Web Services) which is an online cloud service that allows users to easily upload files to the cloud. The print job is then sent to a remote printer which can print the document in a variety of different ways. Overall the new printing technique has two main advantages over faxing and sending through email. The first advantage is that the customer is able to see a copy of their document immediately instead of having to wait a few days for a fax to be received. The second advantage is that a customer no longer has to have a working printer and electricity to send the job to be printed. There is no need to re-dock the printer after it has been used and no electricity is required to print the documents. At the end of the day, the new printing technique was only possible because of the popularity of a cloud based storage service. Although the service is not cheap, the fact that a large number of people use the service does
