Photoshop Elements is easier to use than Photoshop, in part because it's a grid-based design program that makes choosing, editing, and resizing designs less fraught. Although Photoshop elements is similar to Photoshop, it lacks layer-based editing capabilities and its tools are not as intuitive. A few of Photoshop's key features are missing from Elements. You can read more about using Elements in Chapter 6. Photoshop One of the most common tasks most photographers perform with Photoshop is combining images. You can take your best images from a vacation, combine them with images from other sources, and polish the results into a single masterpiece. You can also edit any one of the images in the photo to make it less fancy, or add special effects to liven up the image. Photoshop has a variety of tools and features for modifying images. They enable you to crop the image, edit it by resizing, or even to separate it into multiple layers — as if you were carving up an onion! The following sections explain how to modify images with Photoshop's tools and features. Getting the lay of the land Photoshop's basic process of working with images is similar to how you work with text documents. You create a new document with the size that you need and, in most cases, choose a default file type. Therefore the argument type mismatch error is right on the money. The Go Playground shows that for sendSMS(), the first argument is: From: string The To: string argument, however, is an integer type, so you would need to call smile.Addr(10, "For example

Three orphaned calves born at the Large Animal Teaching Hospital at the University of Illinois have succumbed to bacterial pneumonia. The newborns were delivered on Wednesday and remained with a caretaker until early Monday, when they were taken to the UI College of Veterinary Medicine, where they were diagnosed and treated for bacterial pneumonia. They were said to have been taken off of life support Tuesday evening and died overnight, according to the article in the UI News. These are the first two cases of bovine corona viruses (BCoVs) to be diagnosed at the UI College of Veterinary Medicine since 2011, when two calves were diagnosed with BCoV infections at Purdue University and transported to the UI College of Veterinary Medicine. Fitness industry heats up with more than a dozen big exercise brands competing for your dollars The meeting room at a Chicago hotel was packed full of hundreds of fitness enthusiasts, many of whom had been up for hours to attend a fitness conference. New numbers from the American College of Sports Medicine show that more than 50% of exercise professionals in the United States have received fitness or health information about the new “Big 12” brands, according to a recent study sponsored by FitnessWise. “The study is a big deal for all of us. It’s not a question that’s on my radar screen in terms of endorsement opportunities or anything like that,” says Dani Eslake, CTA, a coach, owner of Toronto area-based Exelman Training Systems and co-founder of Fit Club Fitness. “But it’s a wakeup call. We’ve seen people talk about this in the industry for the past two years, so you just feel like you’re maybe late to the party. But this is the party,” he adds. The league includes a dozen popular fitness brands that are no longer selling over-the-counter products and have changed their business model to a membership-based model. There are also three new brands in the group – EvaGym, Fit4Less, and Fitnessology – and two that are no longer active – Medifast (formerly Paula Deen Nutrition) and Personal Fitness (formerly Jillian Michaels) For instance, EvaGym joins Crunch, At The Beach, the Iron Yard, Perfect Body, Core Power, and other hard-core fitness brands. “We all know the growing popularity of exercise, but it’s been
