Q: Class in VB6 is undefined I am working on a project, in VB6 and I need to refactor a large code a little bit. The problem is that I had to use many classes in VB6 but when I try to run a form containing one of those classes, it says that a reference to the class, is undefined. I'm trying to figure out if my problem is that the class is not referenced, and in which location is the problem. MyClass.cls Option Explicit Private m_ThisObject As objController Public Property Set ThisObject(ByVal Value As objController) Set m_ThisObject = Value 648931e174

11 Things I've Learned About Women Quite simply, men and women are very different. Some of the differences have to do with how we look at the world. Others have to do with the way we think, feel, and react to the world around us. In this blog, I'm going to be writing about some of the differences between men and women. I'd like to share some of the things that I have learned while being with my girlfriend. I hope you find something you
