Wireless GuardAll PX, Qx, and Rx Series devices to connect to the GuardStation's Wireless Direct. Connect to the GuardStation to download the firmware and application software, and configure security settings for your. Support to the GuardStation firmware version 2.

Joe Gibbs Says His QBs Are the Reason for Their Success If the Washington Redskins don't take a quarterback in the upcoming NFL Draft, coach Joe Gibbs says the team's quarterbacking success will be due to his legacy as a coach. Speaking at the NFL Combine on Tuesday, Gibbs said if the Redskins don't take a quarterback this offseason, he'll be responsible for the team's success in his "storied history as a coach." "If we don't start building a young core, then you'll see what happens in our storied history as a coach," Gibbs said, via the Washington Post. "We're not going to win the Super Bowl with our current team." Gibbs said the Redskins should take a quarterback "at the very least." "If we end up with a guy that starts playing, plays well, is a second-round draft choice, what in my mind a second-round draft choice is worth," Gibbs said. "If we don't then, it's my fault. Because if we don't, then we're not going to win a Super Bowl." Gibbs couldn't say if the team would draft a quarterback high in the first round or later in the draft. "I have not had a conversation with anyone, with anyone, in anybody's plan," Gibbs said. "All I know is we need to do something. We need to do something for this team. If we don't get a quarterback, I am responsible for that because we have not done anything for a long time."

Q: Is single-assignment macro required in the standard? The only way I know to declare a variable with a name is with a single-assignment cast. Is it needed to be a compiler extension or is
