Intermediate Locking and unlocking the vertical lift gate of a medium-duty/heavy-duty pickup truck is often difficult because it is made in one piece and covers a substantial distance of the truck bed from top to bottom. Attempts have been made to make the gate somewhat more convenient to open. For example, U.S. Pat. No. 6,705,543 discloses a variety of mechanisms to push and pull the gate between open and closed positions. Unfortunately, many of these mechanisms require that the power lift system be deactivated to open or close the gate. This is inconvenient to the truck owner who may want to lock the gate without locking the truck bed, e.g. to prevent theft. Moreover, the mechanisms often are somewhat complicated and require the use of two hands, which can make it difficult or impossible for one person to open or close the gate while riding in the truck bed. Accordingly, a need exists for a simpler lift

gate mechanism that can be activated without locking or deactivating the truck's power lift system."

Field The present disclosure relates to an electronic device, and particularly to an electronic device with a reduced edge of a display. 2. Description of Related Art With the development of wireless

communication and information processing technologies, electronic devices are no longer exclusive for use in the office.

Electronic devices, such as personal digital assistants (PDA), game consoles, mobile phones, personal computers, etc., are utilized in our daily life, including work, school, and play. The display of many

electronic devices is an important user interface for displaying content in the electronic device. When the electronic device is placed on
