Roblox is a program that gives you the ability to design and build your own games. You can create games that you can play right on your browser, and most games require no download. The goal of the game is to score points, drive the opponent out of the playing field by a certain number of points, and to reach first place. The application enables the players to produce programs that can be stored in a virtual memory of a computer. Developer's story The developers of the platform are David Baszucki and Erik Cassel. Before releasing Roblox, they sold their company, Magic Mushroom Games, to their current publisher, Libratone. The company released their first game, Marble Blast Ultra, for the Mac. The first version of Roblox was released in 2006 for the PC. In 2010, Roblox was released for the Mac. In 2011, it was released on iOS as well. Players control a character, and the objective is to collect rubber ducks and other characters and avoid enemies. In addition to avoiding obstacles and enemies, players can drag in other characters and other items. The game offers many other mechanics besides drag-and-drop games. You can navigate through different maps, play with different modes, get help from friends, and participate in tournaments. Roblox offers the game's own currency, Robux, which can be used to create, publish, and play games on the platform. The developers of the platform are actively continuing to add new features to the platform, including a Disney universe. In-Game Trading The game offers a virtual currency called Robux. Players are usually offered the option to make purchases with Robux. Players can even "rent" Robux to each other, earning tokens that the player will be able to redeem later, as the other player will have the option of spending those tokens back on the platform. The game also offers an in-game marketplace that permits players to buy and sell items. The creators of the platform introduced a virtual economy during the 2010s. Microtransactions are available on the platform. The most common types of microtransactions are buying costumes and profile avatars. The game features several experiences related to money such as tournaments, a market, and "rent". Roblox's microtransactions and in-game purchase system have received criticism and
